KEY FUNCTIONS

Pressure Redistribution
The overlay features the ActiveX™ material. ActiveX™ is a high grade of elastic type foam which is responsive to temperature around inflamed areas. ActiveX™ will become softer as it becomes warmer. So around a pressure point it will always soften and allow the blood to circulate freely.

All-way Contour Cover
The Icare overlay is made with an Elastex material cover. This fabric has a high elasticity in every direction enabling it to conform with body and sleeping surface contour.

Ventilated Side Fabric
Vant fabric is a three-dimensional polypropylene material that has high air permeability and is anti-bacterial. We use this on the side wall of the overlay covers to greatly increase air movement.

Any Sleeping Surface
The Icare overlay can be used on any type of sleeping surface. The pressure redistribution and feel will vary depending on the under surface.
